Livingston & JDSU Host Seminar on Testing Next Generation Fibre Optic Networks

26th January 2012, near Reading, UK

23rd November 2011 - Test equipment sourcing specialist Livingston and leading optical test hardware/software supplier JDSU have teamed up to stage a seminar entitled “Enabling Next Generation Networks.” Featuring a mixture of both high level and more in-depth technical presentations, this event is certain to prove highly beneficial to engineers and project managers involved in upgrading the core optical network as 100Gbit Ethernet technology begins to be implemented - with details being given of state of the art equipment and innovative new test/monitoring techniques. It will take place at the Best Western Reading Moat House, Berkshire, UK, on the 26th January.

The agenda for the event is as follows:

- What is driving the need for next core generation networks?
- Testing challenges from the physical layer up to the IP layer
- Testing ROADM networks with 40Gbit/100Gbit Ethernet

“100Gbit Ethernet has huge potential, enabling widespread proliferation of higher bandwidth, video-based applications which are far more compelling to subscribers. Attendees at the upcoming seminar will leave with a greater comprehension of the various test challenges that must be addressed if they are to assure its delivery,” states Philippe Suel, Marketing Director for Livingston Group. “Organising this event shows how both Livingston and JDSU are firmly committed to supporting network operators, their contractors and their technology partners, as they migrate to more advanced optical network infrastructure, so this important step forward in the progression of telecommunications goes ahead without major difficulties arising.”

To register for this event:

Those interested in attending this seminar should go to -

About Livingston:

Livingston provides and manages test equipment for companies in more than 100 countries worldwide, giving them access to leading edge products regardless of their budget constraints. Founded over forty years ago, the company has built up a highly experienced team of engineering and supply chain professionals. Its services include rental, calibration management, and inventory management. Partnering with Livingston allows companies to optimise their capital expenditure, bringing greater return on investment, as well as generating cash for unused or underused assets through its equipment disposal and redeployment activities.
